

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## ADVERTISEMENT.

---

IN the last year, the Publishers of this volume brought out, in four sheets, their "Newly Constructed and Extended Map of India;" during the preparation of which they were favoured with very valuable assistance, especially with the communication of authentic documents, still in manuscript, never before consulted, which served, as to various places occurring in their Map, essentially to correct the former statements. Thus they were enabled to bring that Map before the Public with no small confidence in the general accuracy of its geographical positions.

It presently occurred to the Publishers, that in consulting such a Map, an Index, containing the name and ascertained situation of every place, however inconsiderable, would be a valuable accompaniment; especially as all the Gazetteers that have appeared, however correct, according to the former geographical information respecting India, would now, unavoidably, in very many instances, mislead an inquirer.

To facilitate, therefore, the use of their Map, the following Index, the first attempt of the kind, has been prepared, in a size convenient for a Manual. For the names of places, and their situations, the Map itself has been uniformly consulted, and, it is hoped, with all the correctness which such an extended occupation could possibly allow.

The Publishers beg leave to add their hope that this Index, even when separate from any Map, will be found to serve a valuable purpose. Thus will be ascertained the different geographical situations of the large number of places which, in several instances, bear the same name; while, by consulting such an Index, the relative situations will immediately appear, of whatever places may become the subject of inquiry to any reader of Indian history.

*London, May 20, 1826.*
